Key Insights

- The dataset contains **10,000 banking customers**.
- **2,038 customers (20.38%)** have churned, while **7,962 (79.62%)** have been retained.
- The customer table provides detailed information about geography, gender, age, credit score, account balance, and banking products.
- **Churn Status** distinguishes churned customers from retained customers.
- **Activity Status** identifies active and inactive banking customers.
- The table can be used to investigate individual customer records and identify customer segments requiring attention.
